

1. CHOOSE a source

related work
model matching
pivot from a negative
hypothesis & axiom audit
vacuity audit
study notes

2. SPIN

produce the artefact: a related-work summary, a role mapping, a pivot path, a hypothesis to challenge, a proof claim to retest, or a study note

3. DEMAND

a reason why the strand extends the ground

4. AUDIT

a second agent rereads the reason. Flag silent assumptions, logical jumps, and claims not backed by the ground

6. ZOOM OUT

every few loops, draw the architecture, question the gaps

5. APPLY

promote, reject, or refactor the ground

GROUND TRUTH

core idea
+ proven code
+ accepted math
improves every loop

refines
