

Single connected Galois cover

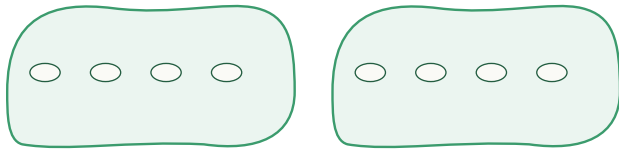

$$g \geq 173 \text{ (Hurwitz floor)}$$

Hurwitz on degree- $|G|$ cover:

$$g \geq 1 + 14400/84 = 173 \text{ (lower bound).}$$

Disjoint union of two S_5 -Galois covers

$$g = 4$$

$$g = 4$$

$S_5 \times S_5$ acts componentwise.

Per-component Hurwitz on degree-5 cover:

each Bring's curve has $g = 4$. Total $g = 4 + 4 = 8$.
